DESCRIPTION	Lithium powered marine safety light systems are designed to be stored for up to five years before use. The battery cells are hermetically sealed. Pressurised primary lithium/sulphur dioxide and as supplied are electronically protected by a fuse and from external environment by a moulded plastic casing. In this state the units constitute no definable hazard to health. However, disassembly, abuse or destruction of the battery cell will expose the contents and the following Health and Safety Hazards.

SECTION 3: HAZARD IDENTIFICATION

LITHIUM METAL:	This is flammable when in contact with water. It reacts violently to produce hydrogen and lithium hydroxide. Use only soda ash, sodium chloride or graphite to extinguish flames.
SULPHUR DIOXIDE:	This is a colourless gas with a pungent choking odour. The fumes are toxic when in contact with fire. The vapour will cause irritation of the eyes and throat, which can result in bronchitis, asphyxia and conjunctivitis. See First Aid notes below.
ACETONITRILE:	This is a colourless volatile liquid with an ether like odour, which is highly flammable. The toxic fumes should not be inhaled as they can cause fatigue and abdominal pain. In severe cases there may be delirium, convulsions, or paralysis and coma. See First Aid notes below.

ROUTES FOR ENTRY:			
Sulphur Dioxide	**Inhalation:** Yes	**Skin:** Yes	**Ingestion:** Yes

HEALTH HAZARDS (ACUTE & CHRONIC)

Carcinogenicity:	None
Signs and Symptoms of Exposure:	Sulphur Dioxide – irritation of nose, throat, ears and/or skin. Suffocating odour.
Medical Conditions:	Generally aggravated by exposure – sulphur dioxide – asthma and other respiratory diseases.
Emergency and First Aid Procedures:	If cell vents, personnel should be evacuated from contaminated areas.
	Artificial respiration should be given if breathing stops. Flush any material from skin.

SECTION 4: FIRST AID MEASURES

In the unlikely event of the battery becoming damaged the user may come into contact with the above components.

EYES:	Irrigate thoroughly with water for at least 15 minutes. Obtain medical attention.
INHALATION:	Remove from exposure, rest and keep warm. In severe cases, or if exposure has been great, obtain medical attention.
SKIN:	Drench the skin thoroughly with water. Remove contaminated clothing and wash before re-use. Unless contact has been slight, obtain medical attention.
INGESTION:	Wash out mouth thoroughly with water and give plenty of water to drink. Obtain medical attention.
	Other materials are either inert or have low hazard associated with their exposure.

SECTION 5: FIRE FIGHTING MEASURES

In the case where significant quantities of lithium / sulphur dioxide batteries have been involved in a fire, account must be taken of the possibility that flammable gases might be evolved should water come into contact with the cold battery residues. These gases might include Acetylene, Hydrogen and Cyanide. It is recommended that ventilation should be maximised should this scenario be realised.

Flash Point:	NON-FLAMMABLE (Open flame)
Extinguishing Media:	Lith-X (graphite based) or other metal (Class D) powder fire extinguisher. If a fire is in an adjacent area, and cells are packed in their original containers, the fire can be fought based on fuelling material, e.g. paper and plastic products.
Special Fire Fighting Procedures:	Use a self-contained breathing apparatus.
Unusual Fire and Explosion Hazards:	Battery may vent when subject to excessive heat-exposing contents.

SECTION 6: ACCIDENTAL RELEASE MEASURES

Dispose only via approved landfill site or incineration by an approved source. Steps to be taken in case material is released or spilled. Remove personnel from area until fumes dissipate.
Provide maximum ventilation to clear any hazardous gases, waste disposal method. Dispose of cell or battery in accordance with local, state and Federal Environmental regulations.

SECTION 7: HANDLING AND STORAGE

Handle and store in cool, well-ventilated area. Keep out of direct sunlight and away from heat sources.

SECTION 8: EXPOSURE CONTROLS / PERSONAL PROTECTION

External corrosion of the Nickle plated can and tags could result in the formation of toxic metal salts. Avoid ingestion. Observe personal hygiene. Wash hands after contact.
